

# About the project

Cassiopeia is a constellation in the northern sky, named after the vain queen Cassiopeia in Greek mythology, who boasted about her unrivalled beauty. Cassiopeia was one of the 48 constellations listed by the 2nd-century Greek astronomer Ptolemy, and it remains one of the 88 modern constellations today. It is easily recognizable due to its distinctive 'W' shape, formed by five bright stars.

## The puzzle

Like the real constellation, the puzzle is made of 5 main stars. To solve the puzzle, move the box pointing at the sky and watch the stars turning on and off.

*"Your goal is to turn on only the five stars of the constellation"*

As you get closer to the solution, more and more stars will light up. Some stars can also lie and shine when pointing to other parts of the

sky but Alfa Cassiopeiae, the most bright star of both the constellation and the box, will always tell you the truth and turn on only when you are about to solve the puzzle. Open the box to see inside.

**Do not shake  
the box**
